

5 Steps To Sustainability

Cycle or walk to local shops

Why not try cycling or walking to the local shops? This way you can save money whilst also benefiting the environment.

Use water saving shower heads

Using a water saving shower head can reduce your consumption by over 50% by regulating the water flow or adding air.

Reduce your energy-usage

Turning off unnecessary lights, or switching to LED lightbulbs, means you can reduce your energy consumption by up to 53%!

Use natural cleaning products

Make your own scented all-purpose cleaner using white vinegar, lemon rind, rosemary sprigs and water.

Join your local community garden

These shared spaces offer the opportunity to come together to grow your own food and flowers whilst spending time with friends!
